

iSON Moulding maintains its position as a leader in the supply of POS brewery components by continuing to evolve and expand its skill base and competences whilst embracing its responsibility to provide solutions to new customer design challenges.

Our knowledge of injection moulding processes means we can quickly identify which plastic is required to meet the desired POS component finish.

By adopting a customer centric approach, we pride ourselves on Quality and Delivery. Our customers keep coming back because we repeatedly deliver high quality components that meet precisely with the desired customer requirements.

Combining our materials expertise with our vast experience of precision injection moulding, 24 hour manned production, quality control and our exceptional work ethics helps us to stand out from our competitors.

We can offer a large range of alternate finishes for example Nickel Chrome plating in Bright and Satin finishes, also Gold plating with additional secondary coats to protect the plating from liquid spillage corrosion if required.

A wide range of Plastic paint finishes are available through iSON Moulding, ranging from High gloss to Satin or maybe Matt finishes in standard or bespoke colours. Other options include Nextel (a suede finish) as well as Softfeel paints.

We also offer a variety of shielding options; EMC, EMI and RFI shielding to name few.

Various print options are available. With water transfer printing, there are many different patterns and designs, including Wood grain, Marble, Carbon and Granite effects. These can be transferred to complex geometrical shapes.

iSON offers facilities for plastic component polishing, giving your component that sharp aesthetic eye catching clean look.

*“Here at iSON Mouldings we understand the importance of delivering high specification components at competitive prices. Having manufactured and supplied specialist Point-Of-Sale (POS) brewery components for many years, our valued customers’ benefit from our experience and knowledge of highly visual cosmetic parts.”*

Carl Anderson, *Managing Director*
